The HART Lab (https://hartlab.wiscweb.wisc.edu/) at the University of Wisconsin-Madison is currently recruiting one MS student to study the dynamics of western spruce budworm outbreaks in the Southern Rocky Mountains. The student's thesis will involve new field data collection and the analysis of some new and existing tree-ring data. The project includes an annual stipend, plus tuition remission and health care benefits.

The ideal candidate would have a passion for field work as well as tree-ring experience and strong quantitative skills. Applicants must have a BS degree in forestry, ecology, geography, or another related discipline. Excellent English writing and verbal communication skills are essential.

Interested applicants should fill out the online recruitment survey (https://uwmadison.co1.qualtrics.com/jfe/form/SV_eQo9EiYrEDMeZbn), where you will provide background information (e.g., undergraduate GPA, GRE scores, etc.), describe your research background and upload PDFs of your CV/resume and cover letter. Review of applications will begin immediately. If you have questions about the recruitment survey or the position, please email Dr. Sarah Hart at sarah.hart@wisc.edu.
