

Functional Traits INTERNATIONAL SUMMER SCHOOL

MAY 27-JUNE 1, 2018 HOTEL SANTA VIVIANA, VILLA DE LEYVA, COLOMBIA

Description

This course is a comprehensive introduction to the concepts and theories related to the functional traits of organisms, with a particular emphasis on plants. Students use a trait-based approach to examine the response of organisms to environmental gradients, to explore community assembly and to understand how plant functions can be scaled to the ecosystem level. Lectures include how to measure traits, application of the approach to understand biotic responses to land use change and to global change. A brief introduction to existing trait databases, their correct utilization and to the growing discipline of eco-informatics is presented. This seventh version of the course will take place in the Andean tropics and will include hands-on experience of measurement of functional traits and a field trip to an upper mountain tropical rain forest and a paramo ecosystem. The course is offered in English and is open to graduate students, postdocs, researchers and professors. Candidates should complete the application form and send it with a copy of their CV to Juan Posada.

Inscription: US \$300* Application deadline: March 1, 2018 Application results: March 15, 2018

Contact and information: juan.posada@urosario.edu.co and http://www.cef-cfr.ca/index.php?n=Membres.AlisonMunsonPlantTraits

*covers lodging in shared rooms (3-4 people), breakfast and transportation to the field

Confirmed Professors

- Eric Garnier (CNRS, CEFE, France)
- Bill Shipley (University of Sherbrooke, Canada)
- Alison Munson (Laval University, Canada)
- Francesco De Bello (Institute of Botany, Czech Academy of Science)
- Juan Posada (University of el Rosario, Colombia)
