# Turning Your Smart Phone into a Tricorder

# Disease Burden in Canada

Disease	Number of new cases per year	Number (%) of Canadian living with disease	Cost of treatment (million \$)
Alzheimer	60,000	280,000 (0.74%)	\$431
Parkinson	5,500	100,000 (0.31%)	\$201
Stroke	50,000	300,000 (1%)	\$665
Heart Disease	1,200,000	16,000,000 (5%)	\$6,818
Asthma	138,000	2,744,000 (8%)	\$705
Atherosclerosis	112,000	544,000 (1.7%)	\$19,800
Schizophrenia	10,240	259,200 (0.81%)	\$1,637
Lung Cancer	25,600	39,884 (0.12%)	\$163
Prostate Cancer	25,500	150,135 (0.47%)	\$1,033
Breast Cancer	23,590	153,777 (0.48%)	\$1,161

# Healthcare Mandates

- **Diagnostic**

Do you have a given disease/condition?

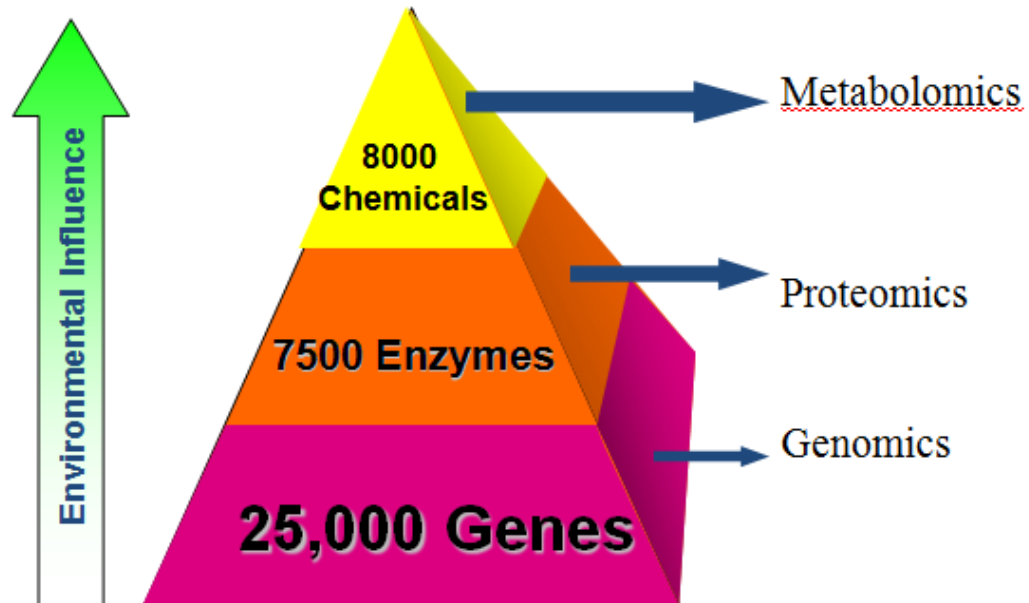

- **Prognostic**

How well will you do with this disease/condition?

- **Predictive**

Odds of getting a given disease/condition.

# Environmental Influence

Food

Protein

# List of Metabolites

Glycerol	Indoxyl sulfate	Carnosine
Vitamin D	Choline	Vitamin B12
Phenylalanine	Lactate	Folate
Tyrosine	Glutamate	Taurine
Leucine	Glutamine	Bilirubin
Aminoadipic acid	Glucose	ADMA
TMAO	Formate	Pyruvate
Betaine	Aldosterone	Cortisol
Homocysteine	Testosterone	Dopamine
Uric acid	Estradiol	HPLPA

# Utilizing Biomarkers

- Historically we have stuck with the idea  
**one biomarker = one disease**

This limits accuracy, precision and sensitivity/specificity

**Glucose ( $> 6.1$  mM – diabetes)**

# Fatty Acid

Nat Med. 2011 Apr;17(4):448-53. Epub 2011 Mar 20.

## Metabolite profiles and the risk of developing diabetes.

Wang TJ, Larson MG, Vasan RS, Cheng S, Rhee EP, McCabe E, Lewis GD, Fox CS, Jacques PF, Fernandez C, O'Donnell CJ, Carr SA, Mootha VK, Florez JC, Souza A, Melander O, Clish CB, Gerszten RE.

Cardiovascular Research Center, Massachusetts General Hospital, Harvard Medical School, Boston, Massachusetts, USA. [tjwang@partners.org](mailto:tjwang@partners.org)

# Discovering Biomarkers

- Omics technologies now suggest  
**many biomarkers = one disease**
- This improves accuracy, precision and sensitivity/specificity
- The problem is the math (or biomarker model) gets much more complicated

Cholesterol ( $> 5.2$  mM – CVD risk)

Triglycerides ( $> 1.8$  mM – CVD risk)

# List of Metabolites

Glycerol	Indoxyl sulfate	Carnosine
Vitamin D	Choline	Vitamin B12
Phenylalanine	Lactate	Folate
Tyrosine	Glutamate	Taurine
Leucine	Glutamine	Bilirubin
Aminoadipic acid	Glucose	ADMA
TMAO	Formate	Pyruvate
Betaine	Aldosterone	Cortisol
Homocysteine	Testosterone	Dopamine
Uric acid	Estradiol	HPHPA

# Discovering Biomarkers

- Historically we have stuck with the idea

hCG (human chorionic gonadotrophin) is a **hormone secreted in pregnancy** that is made by the developing embryo soon after conception. It is used for pregnancy test.

## The Test Cost

Metabolite	Cost of Test
Betaine	\$113.70
Choline	\$100.00
Estradiol	\$125.00
Formate	\$84.00
Glucose	\$45.00
Glutamate	\$98.94
Glutamine	\$98.94
Glycerol	\$48.50
Taurine	\$98.94
Vitamin D	\$210.00

Total: \$1023.02 for 10 tests

# What Are the (Standard) Metabolomic Technologies?

- UPLC, HPLC
- CE/microfluidics
- LC-MS
- FT-MS
- QqQ-MS
- NMR spectroscopy
- X-ray crystallography
- GC-MS
- LIF detection

- Instruments are large (500 kg) and not portable
- Expensive (>\$1 million), hard to use (requires PhD)

# The Problem...

- Metabolomic analysis is expensive, non-portable and difficult to do
- Need to make small (palm size), inexpensive (<\$1,000 for an instrument, \$1 for a test), easy-to-use (Smartphone application), portable (farm/industry friendly) devices

# The Solution...

- Easy-to-use, platform specific kits
- Nanoelectromechanical devices (NEMS)
- Microfluidics
- Engineered biosensors
- Integration of extraction, separation & detection on a single platform

Name: John Smith

Age: 26

Gender: Female Male

Race: Mongoloid / Asian ▼

START

the application will display either a red exclamation mark

# Analyzing

present in biofluids by using electrical impedance-based detection.

If you are at high risk.....

signifying that the patient's health is at risk and that they should seek medical attention

If you are at low risk.....

and that they do not need to seek medical attention.

# Proof-of-concept Design

- Synthesize streptavidin-poly-T
- Synthesize GNPs-poly-A
- Detect the signal on bio-molecule sensor

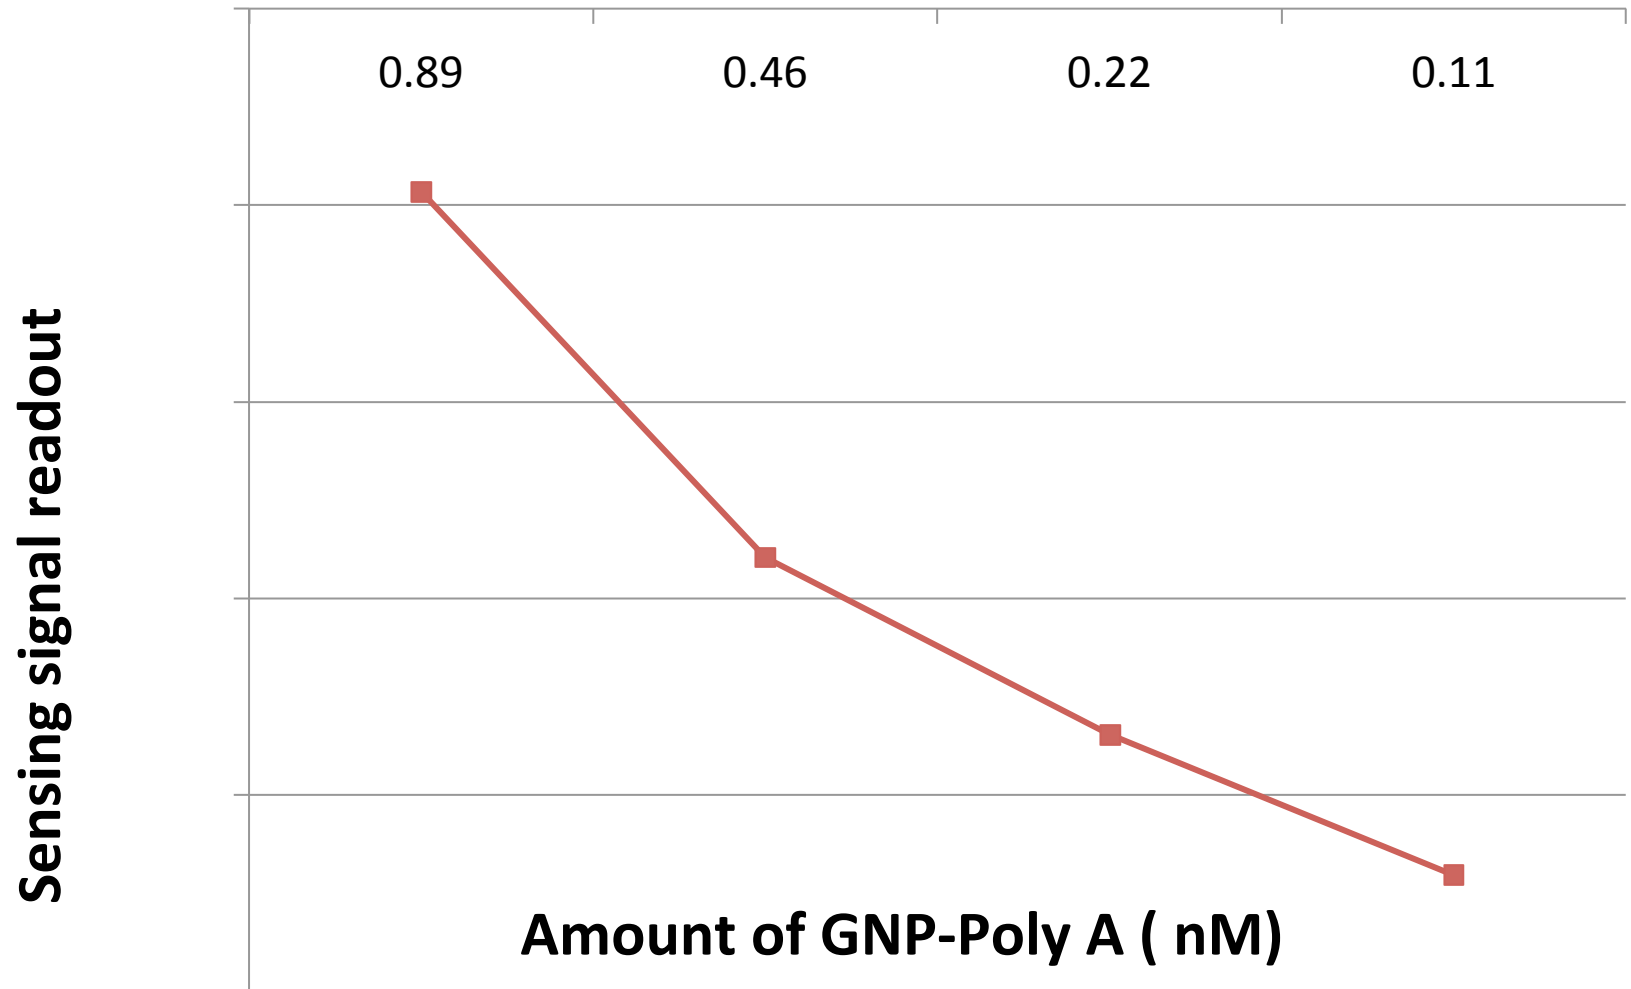

Gold Nanoparticle

Test Sequence: The structure of Poly A and Poly T

Poly T 5'-/5ThioMC6-D/CCC CCC CCC CTT TTT TTT TTT TTT TTT TTT -3'

Poly A 5'-AAA AAA AAA AAA AAA AAA AAC CCC CCC CCC CCC CCC CCC CCC CCC/ 3ThioMC3-D/-3'

# Experimental results

The amount of GNP-Poly A is 0.24, 0.48, 0.96, 1.44 nM

# Electrode Sensor Chips (Nanotechnology)

## Process flow

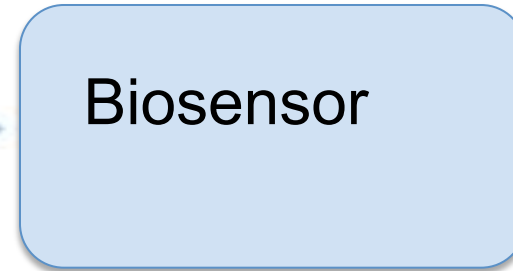

# Analytical and Numerical Simulations

Sensitivity of 2D vs 3D simulations

Bluetooth

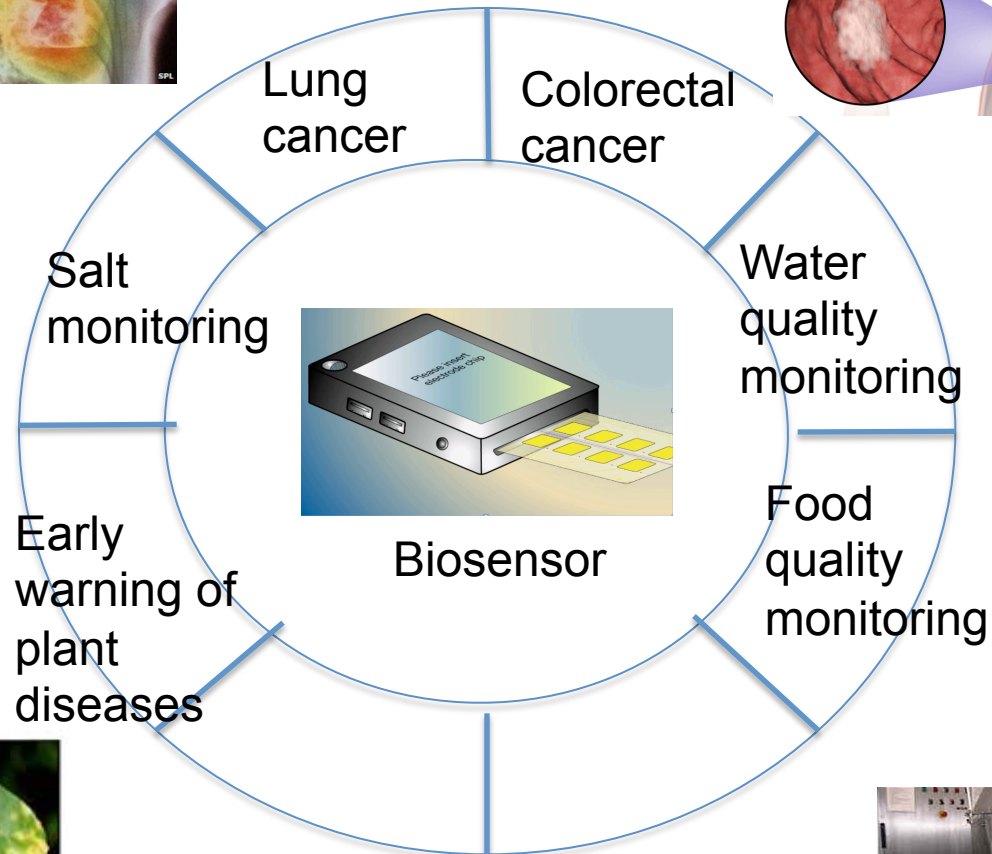

WiFi
